WORK EXPERIENCE

Opsera - Software Engineer-II

2024 - current

Chennai, India

- Designed and implemented the Salesforce data migration feature, taking full ownership from architecture to deployment.
- Upgraded Java microservices to the latest versions, eliminating all vulnerabilities and ensuring zero security risks.
- Refactored microservices to eliminate duplicate code across multiple services, improving maintainability and reducing redundancy.
- Developed numerous Node.js APIs to supply data for the Salesforce Insights page, enhancing data delivery and integration.
- Created complex MongoDB aggregation queries to extract and analyze data for improved insights and reporting.
- Actively participated in code peer reviews to maintain code quality, ensure best practices, and keep the codebase clean and efficient.

Opsera - Software Engineer-I

09/2022 - 04/2024

Chennai, India

- Developed a notification service on the Opsera platform to keep customers informed about pipeline and task statuses via Slack, Email, Microsoft Teams, and Google Meet.
- Enhanced the AWS Integrator microservice by adding support for file uploads to AWS S3 and email notifications via AWS SES.
- Optimized Opsera Pipelines and Tasks, boosting product performance by 30% and enhancing functionality.
- Integrated Jira with Opsera to streamline and automate the Salesforce DevOps process, improving workflow efficiency and collaboration.

Lightcast - Software Engineer-I

07/2021 - 08/2022

Chennai, India

- Designed and implemented a new feature in the Search API to return the IDs of all documents registered with the API in a single query. Prior to this feature, the Search API could return up to 500 records per query; after its introduction, the API now returns 10,000 records in a single query.
- Refactored the legacy codebase to align with the upgraded stack, improving maintainability and performance.
- Refactored Hibernate Criteria queries by rewriting them using the JPA Criteria API, improving query maintainability and performance.
- Proactively resolved 95% of production issues within 24 hours, enhancing system stability and uptime.
- Developed comprehensive unit tests for new Search & Parse API components, achieving 90% code coverage and enhancing functionality.

Lightcast - Software Engineer

01/2021 - 06/2021

Chennai, India

- Implemented a DocumentStore service to handle client-specific formatted resume documents, improving parsing accuracy.
- Integrated the Lightcast Parse API with the DocumentStore service for seamless processing of resume documents.

EDUCATION

College of Engineering, Guindy, Anna University - Bachelor of Engineering, Computer Science Engineering

2017 - 2021

Chennai, India

SKILLS

- Programming Languages : Java, Javascript
- Microservices & APIs: REST API, Spring Boot, Microservices
- Databases & Caching: MongoDB, Redis, AWS S3, MySQL, Hazelcast
- Messaging & Stream Processing: Kafka
- Monitoring & Analytics: New Relic, ELK (Elasticsearch, Logstash, Kibana), Databricks
- Testing & API Management: Postman
- CI/CD & DevOps: Jenkins, Docker, Kubernetes, AWS, Gradle, GitHub, GitLab, Bitbucket
- IDEs: IntelliJ IDEA, Visual Studio Code
- Agile Tools: Jira
